

ONLINE MEDICAL MANAGEMENT:

Introduction – Purpose

The **Online Medical Management System** is a web-based application that allows customers to purchase medicines and healthcare products online. It enables users to search for medicines, upload prescriptions for prescription drugs, place orders, make online payments, and track deliveries. The system also helps administrators manage medicines, inventory, customers, prescriptions, orders, and payments efficiently. Its purpose is to provide a secure, convenient, and reliable platform for online medical shopping.

Functions / Operations on the Data

1. User Management

- Register new users
- User login and logout
